Agenda

Start

 Meet TA Mentors, Discuss Their Role
 Discuss whether we should keep the question feed or not.
 Discuss the exponential decay of confusion
 Decide on our MVP features

MVP refinement

 How should we pick our base product and our reach product?

Sockets

 Bring up SocketIO and ask if the TA's have any experience with it
 Ask about chart libraries that may be of interest.

Mobile compatibility

 Other than Bootstrap is there anything else we will need to keep in mind?
  With our interactions, a mobile view will be essential
 How do we deal with low connectivity?

Glowing orb

 Is that possible? Necessary? Fun?

Security

 We will be stringifying server side to protect from insertion attacks.
 By using Handlebars we will protect from script attacks

 Ask about any other Security issues we will need to cover?
 Security for sockets?

 Idea recommendations
 Any feedback on our project that would help us refine the scope?
